

Coupling Machining Tolerances

Precision muff couplings, rigid couplings, and drive coupling components — machined for absolute alignment in rotating assemblies.

Specifications

Outside Diameter	50 mm to 400 mm
Length	100 mm to 1000 mm (0.1 – 1 metre)
Surface Finish	10 to 50 microns
Bore Tolerance	H7 / Custom Transition Fit
Keyway Tolerance	P9 / Js9
Perpendicularity (Faces)	Within 0.02 mm
Material Hardness	As specified (e.g. 250–300 BHN)

Materials

- Stainless Steel — food processing and corrosive environments
- Duplex — marine and pump coupling applications
- Super Duplex — critical chemical and offshore applications
- Nitronic 50 — high-load coupling applications

Manufacturing Process

- Forged steel block sourcing with UT inspection
- CNC turning of OD and face with perpendicularity check
- Precision boring to exact shaft fit tolerance
- Wire-Cut EDM for precise keyway geometry
- VMC drilling and tapping for coupling bolts/pins

Key Feature

Face and bore are machined in the same clamping setup to guarantee perfect perpendicularity — preventing shaft bending and premature bearing failure.
