

Impeller Balancing Standards

Dynamic balancing for pump impellers — ensuring vibration-free operation and extended bearing and seal life.

Balancing Standards

Standard Grade	ISO 1940 Grade G6.3
High-Speed Grade	ISO 1940 Grade G2.5 (critical applications)
Balancing Method	Static and dynamic balancing
Correction Method	Precision milling or grinding at calculated angles

Impeller Specifications

Impeller Types	Open, Semi-Open, Closed, Mixed Flow
Maximum Diameter	Up to 1500 mm
Bore Tolerance	H7/h6 fits (custom available)
Surface Finish	Ra 1.6 to 3.2 microns (machined areas)
Keyway	Standard or tapered (Wire-Cut EDM)

Quality Assurance

- 100% DPT on all machined surfaces — zero porosity guarantee
- Balancing report issued with every impeller (ISO 1940)
- Material test certificates from certified foundries
- PMI verification on all incoming castings

Materials

- Cast Iron / Ductile Iron — fresh water and general industrial
- Bronze / Gunmetal — marine and fire-fighting pumps
- SS316 / Duplex Steel Castings — chemical, desalination, oil & gas
