

Sleeve Dimension & Tolerance Chart

Precision shaft sleeves for pump applications — protecting shafts from wear, corrosion, and erosion at stuffing box and mechanical seal locations.

Specifications

Diameter Range	50 mm to 400 mm
Length Range	100 mm to 1000 mm (0.1 – 1 metre)
Wall Thickness	Minimum 5 mm (depending on OD)
Surface Finish	10 to 50 microns
Hardness	Up to 60 HRC (depending on material & treatment)
Concentricity	Within 0.005 mm

Materials

- SS410 / SS420 — Martensitic stainless for standard abrasive applications
- Duplex — High strength with superior pitting resistance
- Super Duplex — Exceptional corrosion resistance for marine environments
- Nitronic 50 — High-strength stainless for critical applications

Manufacturing Process

- OD and ID rough turning on CNC lathe
- Through hardening or case hardening
- Internal grinding for precision shaft fit
- External grinding on mandrel for OD concentricity

RFQ Requirements

Recommended documents for quotation: engineering drawing, material grade, seal area finish requirement, hardness specification, and quantity.
