

Thread Profile & Tolerance Guide

Precision threaded lock nuts — heavy-duty retention components for bearings, gears, and rotating assemblies on shafts.

Specifications

Outside Diameter	30 mm to 750 mm
Threading Pitch	1 mm to 120 mm
Thread Types	Metric, Whitworth, Acme, Trapezoidal, Custom
Face Runout	Within 0.02 mm
Locking Mechanism	Spanner slots, grub screw tapped holes

Thread Cutting Process

- CNC single-point threading for exact profiles
- Both right-hand and left-hand threads available
- Thread and locking face machined in same setup for perpendicularity
- All threads verified with calibrated plug gauges

Materials

- Stainless Steel (SS316) — standard pump lock nuts
- Super Duplex Steel — high-stress marine applications
- Carbon / Alloy Steel — heavy gearboxes and turbines

Additional Options

- Castle nut slots for cotter pins
- Radial holes for locking grub screws
- Zinc plating, blackening, or copper plating (anti-galling)
- Matched shaft-and-nut sets available
